

* Symbolic (s. a. *TF-IDF-vector-based*) or neural search engine that, given a claim c in a natural language, yields a set of paragraphs from the knowledge base that are semantically closest to c .

To be trained using a dataset matching sample claims to their evidence within the provided knowledge base.

** NLP-based engine that decides whether a provided set of paragraphs entails given factic claim — see **Chapter 5**.

Trained using a dataset mapping evidence sets coupled with claims to their respective labels.
